

Your Oracle EDI/XML Implementation

We understand that you have a variety of business models, internal requirements, and business processes that must be incorporated in the implementation. We can translate these requirements into the standards and create the guidelines to effectively communicate them with your customers and suppliers. In fact, without the correct knowledge from both a business, architectural, and technical perspective; the implementation can be costly, unscalable, poorly documented, and result in frustration and possible failure. Instead choose a business that has specialized in implementing EDI/Ecommerce for nearly 20 years. Here are some more reasons why you should choose Electronic Commerce, Inc. for your implementation:

- * We are experts at Oracle's EC Gateway and know the patches and practices that result in easier and more efficient implementation.
- * We can evaluate your business processes, and then can map them to the Oracle EC Gateway's extensions including: Quotes, Standard Orders, Configured Orders, Drop Shipments, Subscription Orders, Invoicing, Purchase Order Acknowledgments, and Advanced Shipment Notices.
- * We understand Oracle's EC Gateway, meta data, interface files, debugging tools, preprocessing tables and transaction management.
- * We are experts on EDI X12 and UN/EDIFACT standards and can lead discussions with your customers or trading partners: and with your internal team members.
- * Our president's experience in operations/financial management at Applied Materials and Philips give us the unique skill set of business, project management, and technical knowledge for the implementation from a GLOBAL perspective.
- * We have designed and implemented projects at some of the most prestigious Fortune 500 companies including Oracle EC Gateway Implementations at Lucent Technologies and Juniper Networks: and Oracle Order Management projects at Cisco and Sun Microsystems.
- * We have completed the Oracle EC Gateway training in 2002 and are certified by Oracle.
- * We have nearly 20 years EDI/eCommerce implementation experience with proven methodologies to "jump start" your program.
- * We are local to Silicon Valley, San Francisco Bay Area and Monterey. We can work with you on-site in these areas at no extra cost to you. We can negotiate working on-site in other areas.

Services:
